

# Dynamic Web

Fall 2019

# Things to Cover Today

1. Go Through Steps of Exercise 5
2. Deploy to Netlify
3. Set up routes for the project
4. Create universal header for the site
5. Hook up Firebase for Auth

# Set Up a Netlify Account

Go to the Exercise 5 description in Github and setup your Netlify Account

Set up CI (continuous integration) on your Github repo for exercise 5

# Set up the routes

Refer to Exercise 1 if you have any issues

What routes will you need?

# Routes you will need

1. Sign Up
2. Log In
3. Log Out
4. View Profile
  - a. When should we view profile?

# Universal Header

What is the function of this?

What links will this have?

What will we do to make sure the user sees the correct links?

# How we will be doing Auth

We are going to use **Firebase** for authentication because of its simplicity. This will alter the flow from a more traditional auth flow.

Let's start by hooking up Firebase to our project
